	PAT. NO.		Title
1	10,432,658	T	Systems and methods for identifying and performing an action in response to identified malicious network traffic
2	10,193,898	T	Reputation-based method and system for determining a likelihood that a message is undesired
3	9,444,682	T	Location-aware configuration
4	9,203,865	T	Cluster architecture for network security processing
5	9,003,485	T	Systems and methods for the rapid deployment of network security devices
6	8,977,746	T	Systems and methods for scalable network monitoring
7	8,839,402	T	Systems and methods for scalable network monitoring
8	8,799,992	T	Systems and methods for the rapid deployment of network security devices
9	8,650,632	T	Scalable transparent proxy
10	8,572,190	T	Method and system for recognizing desired email
11	8,560,645	T	Location-aware configuration
12	8,527,592	T	Reputation-based method and system for determining a likelihood that a message is undesired
13	8,504,675	T	Email server system and method
14	8,464,329	T	System and method for providing security for SIP-based communications
15	8,392,496	T	Cluster architecture for network security processing
16	8,316,113	T	Cluster architecture and configuration for network security devices
17	8,223,751	T	Method and apparatus for controlling unsolicited messaging
18	8,191,132	T	Scalable transparent proxy
19	8,176,162	T	Email server system and method
20	8,150,002	T	Method and apparatus for controlling unsolicited messaging in real time messaging networks
21	7,970,844	T	Replicating message queues between clustered email gateway systems
22	7,882,558	T	Tunnel designation system for virtual private networks
23	7,882,187	T	Method and system for detecting undesired email containing image-based messages
24	7,773,604	T	System directing flow of packets by-passing policy-based application for processing by policy engine according to action specification in policy cache
25	7,627,641	T	Method and system for recognizing desired email

26 7,617,305 T Email server system and method
27 7,613,923 T Method and apparatus for controlling unsolicited messaging in real time messaging networks
28 7,613,172 T Method and apparatus for controlling unsolicited messaging
29 7,420,976 T System directing flow of packets by-passing policy-based application for processing by policy engine according to action specification in policy cache
30 7,237,263 T Remote management of properties, such as properties for establishing a virtual private network
31 7,117,530 T Tunnel designation system for virtual private networks
32 7,103,679 T Automatically identifying subnetworks in a network
33 7,006,502 T System using stream specification and action specification stored in policy cache to process the flow of data packets by appropriate action processor
34 6,961,336 T Contacting a computing device outside a local network
35 6,834,350 T Secure and differentiated delivery of network security information
36 6,751,668 T Denial-of-service attack blocking with selective passing and flexible monitoring
37 6,738,908 T Generalized network security policy templates for implementing similar network security policies across multiple networks
38 6,732,199 T Software programmable calendar queue cache
39 6,678,827 T Managing multiple network security devices from a manager device
40 6,625,150 T Policy engine architecture
41 6,618,755 T Automatically identifying subnetworks in a network
42 6,597,661 T Network packet classification
43 6,560,238 T Calendar queue cache
44 D473,879 T Portion of a display panel or computer screen with an icon image
45 6,542,508 T Policy engine using stream classifier and policy binding database to associate data packet with appropriate action processor for processing without involvement of a host processor
